

LumiLeaf Deployment Workflow Guide

Current Development

IntelliJ -> Start XAMPP (Apache+MySQL) -> Run Spring Boot -> Open localhost:8080.

Production

Users -> Domain -> Nginx -> Spring Boot JAR -> MySQL Server. No IntelliJ or XAMPP.

Server Layout

/opt/lumileaf/app/lumileaf.jar
/opt/lumileaf/uploads/
/opt/lumileaf/config/
/opt/lumileaf/logs/

Deployment

Develop locally -> Git -> mvn clean package -> Upload JAR -> Restart service.

Updates

Backup DB -> Build new JAR -> Deploy -> Run migrations (Flyway/Liquibase) -> Verify. Database and uploads remain intact.
